

STAT 505 Assignment Solutions [L1 & L2]

1. The following $n \times p$ data matrix contains $n = 3$ observations for each of $p = 2$ variables X_1 (column 1) and X_2 (column 2).

$$\begin{bmatrix} 3 & 18 \\ 8 & 21 \\ 4 & 20 \end{bmatrix}$$

Calculate each of the following. You can check your work with software, but you should show by hand how the numbers in this case fit into the formula for each.

- (a) The sample mean vector $\bar{\mathbf{x}}$ *Hint: this is a 2×1 vector consisting of the sample means for both variables*

A)
$$\frac{3+8+4}{3} = \frac{15}{3} = 5$$
$$\frac{18+21+20}{3} = \frac{59}{3}$$
$$\begin{bmatrix} 5 \\ \frac{59}{3} \end{bmatrix}$$

Figure 1: Handwritten solution for question 1a.

As shown in Figure 1, the sample mean vector is:

$$\bar{\mathbf{x}} = \begin{bmatrix} 5 \\ \frac{59}{3} \end{bmatrix}$$

- (b) The sample covariance matrix $\mathbf{S}$. Note that we divide by $n-1$ for this (not n). *Hint: this is a 2×2 matrix consisting of the sample variances for both variables on the diagonals and their covariance on the off-diagonals*

As shown in Figure 2, the sample sample covariance matrix $\mathbf{S}$ is:

$$\mathbf{S} = \begin{bmatrix} 7 & 3.5 \\ 3.5 & 2.333 \end{bmatrix}$$

- (c) The sample correlation matrix $\mathbf{R}$

As shown in Figure 3, the sample sample correlation matrix $\mathbf{R}$ is:

$$\mathbf{R} = \begin{bmatrix} 1 & 0.866 \\ 0.866 & 1 \end{bmatrix}$$

$$b) S_{jk} = \frac{\sum_{i=1}^n X_{ij} X_{ik} - \frac{(\sum_{i=1}^n X_{ij})(\sum_{i=1}^n X_{ik})}{n}}{n-1}$$

$$\sum_{i=1}^n X_{ij} X_{ik} = 3 \cdot 18 + 8 \cdot 21 + 4 \cdot 20 = 302$$

$$\sum_{i=1}^n X_{ij} = 3 + 8 + 4 = 15$$

$$\sum_{i=1}^n X_{ik} = 18 + 21 + 20 = 59$$

$$n = 3$$

$$n - 1 = 2$$

$$S_{12} = \frac{302 - (15)(59)/3}{2} = 3.5$$

$$S_1^2 = \frac{\sum_{i=1}^n X_{i1}^2 - ((\sum_{i=1}^n X_{i1})^2 / n)}{n-1}$$

$$\frac{89 - 75}{2} = 7$$

$$S_2^2 = \frac{1165 - 3481/3}{2} = 2.33$$

$$S = \begin{bmatrix} 7 & 3.5 \\ 3.5 & 2.333 \end{bmatrix}$$

Figure 2: Handwritten solution for question 1b.

$$c) r_{jk} = \frac{S_{jk}}{S_j S_k} = \frac{3.5}{(2.646)(1.527)} = 0.866$$

$$S_j = 3.5$$

$$S_j = \sqrt{7} = 2.646$$

$$S_k = \sqrt{2.333} = 1.527$$

$$R = \begin{bmatrix} 1 & 0.866 \\ 0.866 & 1 \end{bmatrix}$$

Figure 3: Handwritten solution for question 1c.

2. Let $\mathbf{X}' = [X_1, X_2]$ denote the vector of variables from above, and define $\mathbf{Y}' = [Y_1, Y_2]$ by

$$Y_1 = (X_1 + X_2)/2$$

and

$$Y_2 = X_2 - 2X_1$$

- (a) Find the coefficient matrix $\mathbf{A}$ such that $\mathbf{Y} = \mathbf{A}\mathbf{X}$.

A) $Y = AX$

$$A_1 \cdot X_1 = \frac{X_1 + X_2}{2}$$

$$A_1 = \frac{1}{2} + \frac{X_2}{2X_1}$$

$$A_2 \cdot X_2 = X_2 - 2X_1$$

$$A_2 = 1 - \frac{2X_1}{X_2}$$

$$A = \begin{bmatrix} 3.5 & 0.6667 \\ 1.8125 & 0.2381 \\ 3 & 0.6 \end{bmatrix}$$

Figure 4: Handwritten solution for question 2a.

As shown in Figure 4, the coefficient matrix $\mathbf{A}$ is:

$$A = \begin{bmatrix} 3.5 & 0.6667 \\ 1.8125 & 0.2381 \\ 3 & 0.6 \end{bmatrix}$$

- (b) Find the sample mean vector and covariance matrix for $\mathbf{Y}$

$$\begin{aligned}
 \textcircled{B} \quad Y &= \begin{bmatrix} 10.5 & 12 \\ 14.5 & 5 \\ 12 & 12 \end{bmatrix} \\
 \bar{Y} &= \begin{bmatrix} 12.3 \\ 9.6667 \end{bmatrix} \\
 S_{12} &= \frac{342.5 - \frac{37 \cdot 29}{3}}{2} = -7.583 \\
 S_1^2 &= \frac{464.5 - 1369/3}{2} = 4.0833 \\
 S_2^2 &= \frac{313 - 841/3}{2} = 16.333 \\
 S_Y &= \begin{bmatrix} 4.0833 & -7.583 \\ -7.586 & 16.333 \end{bmatrix}
 \end{aligned}$$

Figure 5: Handwritten solution for question 2b.

As shown in Figure 5, the sample mean vector and covariance matrix for $\mathbf{Y}$ is: ¹

$$\bar{y} = \begin{bmatrix} 12.3 \\ 9.666 \end{bmatrix}$$

$$S_y = \begin{bmatrix} 4.0833 & -7.583 \\ -7.583 & 16.333 \end{bmatrix}$$

3. The data “companies.csv” is available on our Canvas page and can be read into SAS with the commands below. The variables (columns) are X_1 , X_2 , and X_3 .

```
data company;
infile "/companies.csv" delimiter="," firstobs=2;
input x1 x2 x3;
run;
```

Define new variables $Y_1 = X_1 + X_2 + X_3$ and $Y_2 = X_3 - X_1$. Find the mean and variance for each of Y_1 and Y_2 . Also, find the correlation between Y_1 and Y_2 .

This is the SAS code used in SAS Online Studio for this question:

```
data company;
infile "/home/u64433460/companies.csv" delimiter="," firstobs=2;
input x1 x2 x3;
y1 = x1 + x2 + x3;
y2 = x3 - x1;
run;

proc means data=company mean var;
var y1 y2;
run;

proc corr data=company plots=none;
var y1 y2;
run;
```

The SAS procedures resulted in the following tables that present the mean, variance, and the covariance in figures 6 and 7.

Variable	Mean	Variance
y1	881.2180000	171904.58
y2	555.3080000	315682.64

Figure 6: SAS solution for question 3.1, showing the mean and the variance for Y_1 and Y_2 .

¹after handwriting, I realized the transposing mistake and corrected in the latex document

Pearson Correlation Coefficients, N = 10 Prob > r under H0: Rho=0		
	y1	y2
y1	1.00000	0.97968 <.0001
y2	0.97968 <.0001	1.00000

Figure 7: SAS solution for question 3.2, showing the covariance between Y_1 and Y_2 .
